RENOVATION FOR A BRIGHTER FLOOR FUTURE

Hard facts that strengthen our passion

For years, Bona has experienced the resource saving benefits of properly maintaining and renovating floors. The environmental effects of renovating rather than replacing are clear. By renovating a floor rather than installing a new one, the energy savings are as high as 95% and saves up to 90% in reduced carbon footprint.

Renovation not only offers long-term benefits for the environment, but also cost savings and increased floor hygiene. Furthermore, modern innovations from Bona provides total design freedom, making it possible to create new expressions, without the need to replace the floor. All to shape a brighter floor future.
